The 2010 orthophotography has a ground resolution of 1 foot (30.5 cm) per image pixel. Additional GIS data displayed include major interstate, US routes, state routes, streets, ferry crossings, airports, hospitals, institutional facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled. The location and shape of features in the GIS layers may not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection date.

DATA SOURCES

ORTHOPHOTOGRAPHY - Imagery compiled by Planet衛re, Inc., and published by the DEP (Department of Environmental Protection) Office of Long Island Programs.

BASE MAP/DATA - All data is based on 1:24,000 scale and displays geographic names, places and their symbols, and waterbodies. Some map data is updated quarterly. Data is based on TelAtlas copyrighted data.

MAPS AND DIGITAL DATA - Visit the CT DEP website for this map and a variety of others in PDF format. Visit the CT DEP website to download the base map digital spatial data shown on this map.
