This map displays 2010 National Agriculture Imagery Program (NAIP) infrared orthophotography for the State of Connecticut. It is a color infrared, false color aerial survey taken during the Spring of 2010. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The statewide mosaic is tiled to allow for easier navigation of the image. The input images are not corrected so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Smaller-level data such as major waterbodies, L5 roads, state routes, utilities, railways, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are important geographic locations and waterbodies are labeled.

DATA SOURCES:
- National Agriculture Imagery Program (NAIP) is provided by the US Department of Agriculture through the Aerial Photography Field Office in Salt Lake City.
- 2010 Color Infrared Orthophoto (East) 2,200 DATA SOURCES
- 2010 Color Infrared Orthophoto (West) 4,400
