This map displays 2010 National Agriculture Imagery Program (NAIP) aerial orthophotography for the State of Connecticut. It is a color infrared, leaf on, 3.39 foot (1 meter) aerial survey taken during the Spring of 2010. The aerial orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The resolution and shape of features in other GIS layers will not exactly match those shown on the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major streets, U.S. routes, state routes, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, main rivers, and some town boundaries. Important geographic locations and waterbodies are labeled.
