2010 Color Infrared Orthophoto  
Harwinton, CT

2010 Color Infrared Orthophoto Program (NAIP) aerial orthophotography for the State of Connecticut. It is a color infrared, full on, 3.39 foot (1 meter) aerial survey taken during the Spring of 2010. This aerial orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The orthophotography images are not corrected; hence differences in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers may not exactly match the orthophotography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major intersections, US routes, state routes, airports, railroads, and ferry crossings are displayed but may not exactly match the locations of such features on the orthophotography. Also shown are the locations of roads, buildings, hospitals, educational facilities, rail stations, and some boundaries. Important geographic locations and waterbodies are labeled.

EXPLANATION

DATA SOURCES

ORTHOPHOTOGRAPHY: National Agricultural Imagery Program (NAIP) is provided by the USDA's Farm Service Agency through the Geospatial Data Gateway Office in St. Louis, MO.

BASE MAP DATA: All data is based on the USGS 15-Second terrain and displays geographic names, places and their symbols, town boundaries, counties, and railroads. Base map data is neither current nor completely. Street data is based on TeleAtlas copyrighted data.

MAIN AND DIGITAL DATA: You may download the base map digital orthophoto data from this map.

Map prepared by CT DEP; January 2011. Map is not suitable for PMS land use and association.
