This map displays 2010 National Agriculture Imagery Program (NAIP) infrared orthophotography for the State of Connecticut. It is a color infrared, leaf on, 3.39 foot (1 meter) aerial survey taken during the Spring of 2010. The infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The statewide mosaic is not color balanced so tonal imbalances between individual input images are not corrected so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Major land use such as major mountains, U.S. routes, state roads, rivers, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are roads, airports, hospitals, educational facilities, rail stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY - National Agricultural Imagery Program (NAIP) is provided by the USDA's Farm Service Agency through the Aerial Photography Field Office in Salt Lake City.

BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and boundaries. Important geographic locations and waterbodies are labeled.
