Orthophotography - National Agricultural Imagery Program (NAIP), aerial orthophotography for the State of Connecticut. It is color infrared, 1:3.39 foot (1 meter) aerial survey taken during the Spring of 2010. The infrared orthophotography provides many services, such as observing crop and vegetation condition as well as supporting identification and mapping of bald areas. The statewide data collection is not corrected so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features on other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Minor-level data such as major structures, U.S. routes, state routes, streams, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agricultural Imagery Program (NAIP) is provided by the USDA's Farm Service Agency through the Aerial Photography Field Office in Salt Lake City.
BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and their symbols, town boundaries, rivers, and railroads. Base map data is credible current, see exceptions. Street data is based on TeleAtlas copyrighted data.
