This map displays 2010 National Agriculture Imagery Program (NAIP) aerial orthophotography for the State of Connecticut. It is a color infrared, full color, 1.39 foot (1-meter) aerial survey taken during the Spring of 2010. This aerial orthophotography provides images, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The orthophotography data shows shaded relief, helping to visualize landform features. The location and shape of features in other GIS layers will not exactly match the aerial orthophotography primarily due to differences in spatial accuracy and data collection dates. Shoreline data such as water intakes, US routes, state routes, oceans, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are supporting identification and mapping of habitat areas. The statewide orthophotography data has been shaded to differentiate water from land. The Woodbury (North) map is not colorfast. Visit the CT DEP website to download the base map digital spatial data shown on this map.

ORTHOGRAPHY - National Agriculture Imagery Program (NAIP) is provided by the USDA Farm Service Agency through the aerial photography NAIP Office in St. Louis, MO.
BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and their symbols, towns, boundaries, airports, and railroads. Base map data is not colorfast; see separate source. Street data is based on TeleAtlas copyrighted data.
