This map displays 2010 National Agricultural Imagery Program (NAIP) infrared orthophotography for the State of Connecticut. It is a color infrared, last on, 3.39 foot (1 meter) aerial survey taken during the Spring of 2010. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The infrared bands provide additional information that is not visible to the human eye. The input images is not corrected so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photographs primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major interstates, U.S. routes, state routes, airports, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are hospitals, educational facilities, railroads, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY: National Agricultural Imagery Program (NAIP) is provided by the USDA's Farm Service Agency through the Joint Photography Office (USDA) and the State of CT.
BASE MAP DATA: Map data is based on 1/1,000 scale cadastral or a combination of cadastral and aerial orthophotography. Each map data is neither current nor complete. Street data is based on 1/24,000 aerial photography.
2010 NAIP AIR DATA: Provided by USDA National Agricultural Imagery Program.
