This map displays 2010 National Agriculture Imagery Program (NAIP) digital orthophotography for the State of Connecticut. It is in color infrared, false color mapping survey taken during the Spring of 2010. The infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The statewide view provides a descriptive, user-friendly methodology for displaying data and services in a single view. The orthophotography is not color corrected so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Smaller-scale data such as major interstates, U.S. routes, state routes, streams, railways, and ferry crossings are displayed but may not match the locations of such features as the orthophotography. Also shown are hospitals, educational facilities, main roads, and river boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agriculture Imagery Program, (NAIP), is provided by the USDA's Farm Service Agency through the Aerial Photography Field Office in Salt Lake City.
BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The statewide view provides a descriptive, user-friendly methodology for displaying data and services in a single view. The orthophotography is not color corrected so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Smaller-scale data such as major interstates, U.S. routes, state routes, streams, railways, and ferry crossings are displayed but may not match the locations of such features as the orthophotography. Also shown are hospitals, educational facilities, main roads, and river boundaries. Important geographic locations and waterbodies are labeled.
