2010 Color Infrared Orthophoto Roxbury, CT

EXPLANATION
This map displays 2010 National Agriculture Imagery Program (NAIP) infrared orthophotography for the State of Connecticut. It is color infrared, last on, 3.39 foot (1 meter) aerial survey taken during the Spring of 2010. This infrared orthophotography provides many services, such as observing crop and vegetation condition as well as supporting identification and mapping of habitat areas. The statewide average of horizontal accuracy of the scanned input images is not corrected so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major intersections, 1/3 miles, state routes, streams, railways, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are hospitals, educational facilities, main stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agricultural Imagery Program (NAIP) is provided by the USDA’s Farm Service Agency through the aerial photography 2010 (NAIP in 3.39 foot). BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and supporting identification and mapping of habitat areas. See also below for data sources. Map prepared by CT DEP, January 2011. Map is not suitable. Printed in USA and distributed.

Special thanks to the U.S. Department of Agriculture for the NAIP photos; the state of Connecticut for the GIS data; and all the towns and cities for providing the data.
