This map displays 2010 National Agriculture Imagery Program (NAIP) color infrared orthophotography for the State of Connecticut. It is a color infrared, leaf-on, 3.39 feet (1 meter) aerial survey taken during the Spring of 2010. This aerial orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The statewide orthophotography is not corrected so differences in the range and intensity of colors depending on the area viewed. The location input images is not corrected so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match the actual photography primarily due to differences in spatial accuracy and data collection dates. Street-level data, such as major interstates, US routes, state routes, streets, railways, andurry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.
