This map displays 2010 National Agricultural Imagery Program (NAIP) aerial orthophotography for the State of Connecticut. It is a color infrared, false color (4 meter) aerial survey taken during the Spring of 2010. The aerial orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The statewide accuracy and resolution of this input imagery is not corrected so differences are present in the range and intensity of colors depending on the area viewed. The location and shapes of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and date collection dates. Stream/river data such as major streams, US routes, state routes, schools, railways, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are hospitals, educational facilities, rail stations, and some boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agricultural Imagery Program (NAIP) is provided by the USDA's Farm Service Agency through the aerial photography field office in Hardwick, OH.
BASE MAP DATA - All data is based on U.S. Census data and displays geographic names, places and their symbols, town boundaries, counties, and waterbodies. Base map data is neither current nor complete. Street data is based on TeleAtlas copyrighted data.
