This map displays 2010 National Agriculture Imagery Program (NAIP) aerial orthophotography for the State of Connecticut. It is color infrared, leaf on. A 3.39 foot (1 meter) aerial survey taken during the Spring of 2010. This aerial orthophotography provides many services, such as observing crop and register condition as well as supporting identification and mapping of habitat areas. The statewide coverage of the 2010 NAIP aerial orthophotography includes counties, streets, cities, and other geographic boundaries. The input images is not colorfast so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Stream/river, lakes, major interstates, US routes, state routes, oil pipelines, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agriculture Imagery Program (NAIP) is provided by the USDA's Farm Service Agency through the Aerial Photography Field Office in Salt Lake City.
BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and their symbols, water boundaries, airports, and railroads. Base map data is neither current nor complete. Street data is provided by TomTom/Esri.

EXPLANATION
Map is not colorfast. Colors may vary depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Stream/river, lakes, major interstates, US routes, state routes, oil pipelines, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.
