This map displays 2010 National Agriculture Imagery Program (NAIP) aerial orthophotography for the State of Connecticut. It is color infrared, left on, 3.99 foot (1 meter) aerial survey taken during the Spring of 2010. This aerial orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The statewide map is not colorfast and differences in color and intensity of colors depending on the area viewed. The location and shapes of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Stream/river data such as major streams, L/R routes, major rivers, streams, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are towns, schools, parks, hospitals, educational facilities, main station, and some boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY: National Agricultural Imagery Program (NAIP), is provided by the USDA’s Farm Service Agency through the Visual Photographic Field Office in NAIP Data Co.
ROAD MAP DATA: All data is based on 1:24,000 scale and displays geographic names, places and their symbols, town boundaries, airports, and wildfires. Road map data is not strictly current or complete. Street data is based on Telos/Geo acquired data.
LAND AND GRASSLAND DATA: Vigion of CT 1970, orthoimage data from the map and a variety of others in PDF format. Visit the CT GIS website to download the base map digital orthophoto shown on this map.
