This map displays 2010 National Agriculture Imagery Program (NAIP) infrared orthophotography for the State of Connecticut. It is color infrared, false col., 3.39 ft (1 meter) aerial survey taken during the Spring of 2010. This infrared orthophotography provides many services, such as observing crop and vegetation conditions, as well as supporting identification and mapping of habitat areas. The statewide infrared orthophotography products are consistent and input images are not corrected or enhanced to prevent any present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Non-level data such as major mountains, major roads, state routes, rivers, railroads, and ferry crossings are displayed but may not match the locations of such features in the orthophotography. Also, shown on this orthophotography are homes, schools, airports, hospitals, educational facilities, rail stations, and more boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agricultural Imagery Program (NAIP) is provided by the USDA’s Farm Service Agency through the National Agricultural Imagery Program (NAIP) under USDA.
BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places, and geographic features such as level data such as major mountains, major roads, state routes, rivers, railroads, and ferry crossings are displayed but may not match the locations of such features in the orthophotography. Also, shown on this orthophotography are homes, schools, airports, hospitals, educational facilities, rail stations, and more boundaries. Important geographic locations and waterbodies are labeled.
