This map displays 2012 National Agriculture Imagery Program (NAIP) orthophotography for the State of Connecticut. It is a nominal color, false color, 5.79 foot (1 meter) aerial survey taken in the summer of 2012. The nominal means is not color balanced so tonal variations between individual input images is not canceled. This will cause differences in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major interstates, US routes, main streets, avenues, railroads, and many others are displayed but may not match the locations of such features on the orthophotography. Also displayed are airports, highways, educational facilities, train stations, and town boundaries. Important geographic locations and landmarks are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agriculture Imagery Program (NAIP), is provided by the USGS of the US Department of Interior through the aerial photography field office in Salt Lake City.
BASE MAP DATA - Based on data originally from 1:24,000 scale USGS 7.5 minute geographic quadrangle maps published between 1954 and 1972. It includes political boundaries, water, airports, geographic names and geographic places. Roads and town names are from TIGER™ geographic data that may not match the other geographic features.
