This map displays 2012 National Agriculture Imagery Program (NAIP) orthophotography for the State of Connecticut. It is a national color, fax on, 5.79 foot (1 meter) aerial survey taken in the Summer of 2012. The aerials mosaic is not color balanced so visual imbalance between individual input images is not corrected. This will cause differences in the image and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection times. Street-level data such as major interstates, US routes, state routes, streets, railroads, and train crossings are displayed and may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, main streams, and town boundaries. Important geographic locations and topographic features are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY - National Agricultural Imagery Program, NAIP, is provided by the USGS (U.S. Geological Survey) through National Agricultural Imagery Program 2012 Flight Cycle in South East U.S.

BASE MAP DATA - Based on data originally from the 1:24,000 scale USGS 7.5 minute topographic maps published historically. 1950 and 1990 include principal roadways, railroads, rivers, and geographic features. 1950 and 1990 are from USGS "topographic and bathymetric" maps. These map information are subject to constant revision.
