This map displays 2012 National Agriculture Imagery Program (NAIP) orthophotography for the State of Connecticut. It is a natural color, false color, 3.79 foot (1 meter) aerial survey taken in the Summer of 2012. The erroneous image is not color balanced so tonal imbalances between individual input image is not corrected. This will cause differences in the image and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major interstates, US routes, state routes, streets, industries, and train stations are displayed but may not match the locations of such features on the orthophotography. Also shown are parks, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY - National Agricultural Imagery Program (NAIP) is provided by the US Department of Agriculture through the National Agricultural Imagery Program Office in both state and county boundaries.
BASE MAP DATA - Based on data originally from 1:12,000 scale USGS 7.5 minute topographic quadrangle maps. Published between 1968 and 2010. It includes gridded land use/landcover, roads, waterbodies, water features, landcover, and geographic names. Street and train names are from the NGS feature classification.

MAPS AND DIGITAL DATA - Visit the CT DEP website for the map and a variety of others in 2011 format. Visit the CT DEP website to download the free map digital aerial false color overlays on the map.
