This map displays 2012 National Agriculture Imagery Program (NAIP) orthophotography for the State of Connecticut. It is a
normal color, false color, 3.79 foot (1 meter) aerial survey taken in
the Summer of 2012. The aerosol image is not color
balanced so tonal imbalances between individual input image is
not corrected. This will mean differences in the range and
intensity of colors depending on the area viewed. The location
and shape of features in other GIS layers will not exactly match
information shown in the aerial photogtaphy primarily due to
differences in spatial accuracy and data collection times. Street-level data such as major interstates, US routes, main
routes, streets, landmarks, and survey contours are displayed but
may not match the locations of such features on the
orthophotography. Also shown are airports, bridges, educational facilities, train stations, and town boundaries.
Important geographic locations and landforms are labeled.
