This map displays 2012 National Agriculture Imagery Program (NAIP) orthophotography for the State of Connecticut. It is a normal color, false color, 5.79-foot (1 meter) aerial survey taken in the Summer of 2012. The statewide mosaic is not color balanced so tonal imbalances between individual input images is not corrected. This will cause differences in the image and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match those shown.

Important geographic locations and waterbodies are labeled. Street-level data such as major interstates, US routes, state routes, county roads, and ferry crossings are displayed and may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries.

**DATA SOURCES**

ORTHOPHOTOGRAPHY: National Agriculture Imagery Program (NAIP) is provided by the U.S. Department of Agriculture through the National Agriculture Imagery Program Field Office in Hartford, CT.

BASE MAP DATA: Based on data originally from 1:24,000-scale USGS 7.5’ minute topographic quadrangle maps published between 1969 and 1992. It includes political boundaries, railroads, highways, state and county roads, parks, special use areas, points of interest, and more.

QUADDER ALIASES: The quadnumber is the FAA project number assigned to each file of orthophotography. It is the four-digit number following the name of this layer in the ArcGIS data catalog.

ORIGIN OF DATA: The orthophotography is based on data originally from 1:24,000-scale USGS 7.5’ minute topographic quadrangle maps published between 1969 and 1992. It includes political boundaries, railroads, highways, state and county roads, parks, special use areas, points of interest, and more.
