This map displays 2012 National Agriculture Imagery Program (NAIP) orthophotography for the State of Connecticut. It is a natural color, false color, 5.79 foot (1 meter) aerial survey taken in the Summer of 2012. The natural color image is not color balanced so tonal imbalances between individual input images is not corrected. This will cause differences in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.

Data Sources:
NAIP orthophotography provided through the USDA's Farm Service Agency through the Aerial Photography Field Office in Salt Lake City.

Base Map Data:
Base on data originally from 1:12,000 scale U.S.GS quadrography maps published between 1899 and 1978. All quadrangle boundary, roads, railroads, hydrography, and political roads and political names are from Title 10; AUSPLTM digital data. The map is subject to errors inherent in the cartographic projection and may not be suitable for boundary line determination.

Maps and Digital Data:
Visit the CT DEP website to download the base map digital spatial data shown on this map.
