EXPLANATION

This map displays 2012 National Agriculture Imagery Program (NAIP) infrared orthophotography for the State of Connecticut. It is a color infrared, false color image taken during the summer of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The statewide orthophotography is produced to provide the State of Connecticut and its municipalities with a base layer to analyze and interpret changes in land use and land cover. The input images are not corrected for differences in sensor or are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as minor streets, US routes, state routes, streams, railways, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are hospitals, educational facilities, main stations, and some boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY - National Agriculture Imagery Program (NAIP) is provided by the USDA's Farm Service Agency through the Aerial Photography Field Office in Salt Lake City.

BASE MAP DATA - Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps provided between 2006 and 2015. It includes political boundaries, roads, airports, geographic names, and geographic places. Indian and street names are from State's data. Copyrighted data from map producers is embedded in our current map compilation.

MAP AND PRINTING LAYERS - Use for the CT DED website for this map is a courtesy of others as PDF versions. Visit the CT DED website to download the four map digital data shown on this map.
