This map displays 2012 National Agriculture Imagery Program (NAIP) infrared orthophotography for the State of Connecticut. It is a color infrared, half-in, 3.39 foot (1 meter) aerial survey taken during the Summer of 2012. The infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The resolution of the infrared orthophotography is 1 meter. Infrared orthophotography is not color corrected so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Minor-level data such as minor streets, US routes, state roads, streams, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are airports, geographic features, rail stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agriculture Imagery Program (NAIP) is provided by the United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS)

BASE MAP DATA - Based on data originally from 1:24,000-scale USGS quadrangle maps published between 1964 and 2001. It includes political boundaries, hydrographic features, geographic names, and geographic places. Names and street names are from State-Data.com copyrighted base; these map information is further treated as exempt.

MAPS AND TERRITIAL LIENS - The CT DEEP is the owner of these maps and a variety of other cartographic products. The CT DEEP reserves the right to restrict the use and/or digital spread of these data on this map.
