This map displays 2012 National Agriculture Imagery Program (NAIP) aerial orthophotography for the State of Connecticut. It is a color infrared, full color, 3.39 foot (1 meter) aerial survey taken during the summer of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat area. The raw infrared data has been georectified and labeled. The infrared raw data is not corrected so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Smaller level data such as minor roads, US routes, state roads, railroad, and utility crossings are displayed but may not match the locations of such features in the orthophotography. Also shown are hospitals, educational facilities, main streets, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY: National Agriculture Imagery Program (NAIP) is provided by the USDA Farm Service Agency through the aerial photography field office at Wall Lake, IA.

BASE MAP DATA: Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangles, maps produced between 1998 and 2002. It includes: political boundaries, cartographic, georeferenced maps and geographic places. Drone and street names are from State Acres' copyrighted land map information within Connecticut.

MAPS AND EDITAL DATA: The CT ECO website for this map and a variety of other as FOD format. Use the CT ECO service to download the base map digital spatial data shown on this map.
