This map displays 2012 National Agriculture Imagery Program (NAIP) infrared orthophotography for the State of Connecticut. It is a color infrared, leaf on, 3.39 feet (1 meter) aerial survey taken during the Summer of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The statewide nature of this data makes it particularly useful for large-scale planning purposes. All data sources are not rigorously matched to the pixel locations in the orthophotography, with differences in spatial accuracy and data collection dates. Snapshots of dense areas such as urban environments, US census, state roads, street railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are hospitals, educational facilities, main streets, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY: National Agricultural Imagery Program (NAIP) is provided by the United States Geological Survey through the Aerial Photography Field Office in St. Louis, Missouri.
BASE MAP DATA: Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published between 1969 and 1992. It includes political boundaries, railroads, airports, geographic names, and geographic places. Rights and past sources are from State Rights.

MAPS AND VITALS LINKS: Visit the CT DEP's website for this map and a variety of other maps and data.
