2012 Color Infrared Orthophoto
Middlebury, CT

EXPLANATION

This map displays 2012 National Agriculture Imagery Program (NAIP) infrared orthophotography for the State of Connecticut. It is a color infrared, half resolution, 3.39 foot (1 meter) aerial survey taken during the summer of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The stand-alone images include objects with a certain minimum size, and shadows are not visible. The input images are not corrected so differences are present in the range and intensity of colors depending on the areaviewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and date collection dates. Some-level data such as major waterbodies, US routes, state routes, state and ferry crossings are displayed but may not match the location of such features on the orthophotography. Also shown are towns, village boundaries, county boundaries, and some boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY - National Agriculture Imagery Program (NAIP) is provided by the USDA’s Farm Service Agency through the aerial photography NAIP Ortho-Images (2012-13).

ROAD MAP DATA - Based on data originally from a 1:12,000 scale USGS 7.5 minute topographic quadrangle map published between 2004 and 2009. It includes property boundaries, roads, streets, railroads, airports, geographic names and geographic places. Roads and street names are from State Atlas copyrighted data. This map information contains aerial survey information.

MAP AND DIGITAL DATA - The CT DEEP technical for this map is a variety of other as GIS formats. Only the CT DEEP retains the true map digital spatial data shown on this map.
