This map displays 2012 National Agriculture Imagery Program (NAIP) aerial orthophotography for the State of Connecticut. It is a color infrared, fast m, 3.39 foot (1 meter) aerial survey taken during the Summer of 2012. This aerial orthophotography provides many services, such as observing crop and vegetation condition as well as supporting identification and mapping of habitat areas. The statewide orientation of the aerial photography provides a consistent viewpoint and a common reference for the dataset and for orthophotography produced by other jurisdictions.

Orthophotography images are not corrected so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match the orthophotography primarily due to differences in spatial accuracy and data collection dates. Smaller level data such as major intersections, US routes, state routes, streets, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are schools, hospitals, educational facilities, main streets, and some boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agriculture Imagery Program (NAIP) is provided by the USDA's Farm Service Agency through the Aerial Photography Field Office in Salt Lake City.
BASE MAP DATA - Based on data originally from 1:24,000 scale USGS 7.5-minutes topographic quadrangle maps published between 1969 and 1992. It includes political boundaries, railroads, airports, geographic names and geographic places. Roads and street names are from State Admin. copyrighted data. These map information do not represent current event conditions.
MAPS AND PRINTING LIMITS - You may print this map, except color infrared data, in a variety of sizes as PDF format. You may print this map in color infrared digital data shown on this map.
