2012 Color Infrared Orthophoto
Kent, CT
(North)

EXPLANATION
This map displays 2012 National Agricultural Imagery Program (NAIP) infrared orthophotography for the State of Connecticut. It is a color infrared, half size, 3.79 foot (1 meter) aerial survey taken during the summer of 2012. This infrared orthophotography provides many services, such as observing drop and riparian condition as well as supporting identification and mapping of habitat areas. The map is not colorfast and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers may not exactly match information shown in the orthophotography primarily due to differences in spatial accuracy and data collection dates. Some-level data such as major streams, U.S. routes, state routes, streams, railways, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agricultural Imagery Program (NAIP) is provided by the USDA's Farm Service Agency through the Aerial Photography Field Office in Salt Lake City.

BASE MAP DATA - Based on data originally from 1:24,000 scale USGS 7.5 minute topographic quadrangle maps published between 1940 and 1992. It includes projected boundaries, scale figures, geographic names, and geographic places. Rivers and street names are from State Aids. Copyrighted data: map information and symbols cannot be copied, MAP AND CRITICAL USES - This map is for informational purposes only. This map is not intended to be used as a substitute for floodplain maps prepared by the Federal Emergency Management Agency (FEMA).
