This map displays 2012 National Agriculture Imagery Program (NAIP) infrared orthophotography for the State of Connecticut. It is a color infrared, false color image collected during the summer of 2012. The infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as assisting land use and mapping of habitat areas. The nationwide input images are not corrected so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Smaller level data such as roads, streams, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agricultural Imagery Program (NAIP) is provided by the USDA's Farm Service Agency through the Aerial Photography Field Office in Salt Lake City.
BASE MAP DATA - Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published between 1969 and 1992. It includes political boundaries, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are important geographic locations and waterbodies are labeled.

EXPLANATION
This map is not colorfast and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Smaller level data such as roads, streams, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are important geographic locations and waterbodies are labeled.
