Orthophotography - National Agricultural Imagery Program (NAIP) provides infrared orthophotography for the State of Connecticut. It is a color infrared, half meter, 3.79 foot (1 meter) aerial survey taken during the summer of 2012. This infrared orthophotography provides numerous services, such as observing crop and vegetation conditions as well as identifying identification and mapping of habitat areas. The original orthophotography was edited, classified, and colorized. The input data is not corrected or transformed in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Some level data such as water resources, US routes, state roads, pines, railroads, and train crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are hospitals, educational facilities, main roads, and town boundaries. Important geographic locations and waterbodies are labeled.

Data Sources

Orthophotography - National Agricultural Imagery Program (NAIP) is provided by the USDA National Agricultural Imagery Program (NAIP) is provided by the USDA’s Farm Service Agency through the Aerial Photography Field Office in Salt Lake City.

Map is not colorfast, Protect from light and moisture

Covering the Summer of 2012. This infrared orthophotography provides many geographic locations and waterbodies are important. Important geographic locations and waterbodies are labeled.
