2012 Color Infrared Orthophoto
Washington, CT
(North)

EXPLANATION
This map displays 2012 National Agriculture Imagery Program (NAIP) infrared orthophotography for the State of Connecticut. It is a color infrared, half size, 5.99 foot (1 meter) aerial survey taken during the summer of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The statewide mosaic is not color balanced so tonal imbalances between individual supporting images may occur. Differences in spatial accuracy and data collection dates. Street-level boundaries. Important geographic locations and waterbodies are labeled. The location and shape of features to other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. "Smart-level" sites such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are railroads, educational facilities, main stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agriculture Imagery Program (NAIP) is provided by the USDA’s Farm Service Agency through the Aerial Photography Field Office in Salt Lake City.
BASE MAP DATA - Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangles, with updated data from 1997 and 2005. It includes political boundaries, roads, airports, geographic names, and geographic places. Errors and omissions are from State. "Acme" copyrighted base line-map information is not complete. MAPS AND DATA FILES - Year the CT EGIP received for this map and a variety of other data from FGIS sources. Data the CT EGIP received do not include the base map digital spatial data shown on this map.
