This map displays 2012 National Agriculture Imagery Program (NAIP) aerial orthophotography for the State of Connecticut. It is color infrared, 30,794 foot (9 meter) aerial survey taken during the summer of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The reflectance data is derived from the digital flight line data. The resulting orthophotographs are color infrared true color images. This map is not to scale differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial orthophotography primarily due to differences in spatial accuracy and data collection dates. Small-level items, such as power lines, US routes, state roads, private railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also, shown are hospitals, educational facilities, main stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agriculture Imagery Program (NAIP) is provided by the USDA Farm Service Agency through the Aerial Photography Field Office in East Lake, Ga.
BASE MAP DATA - Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published between 2001 and 2005. It includes political boundaries, roads, with water features adopted from Digital Hydrographic Data System (DHDS) and road names from the Federal Geographic Data Committee (FGDC) National Hydrography Dataset (NHD), a collection of vector shapes for all major rivers, streams, and lakes throughout the United States.
MAPS AND GRAPHICS DATA - Map is CT DEP
