This map displays 2012 National Agriculture Imagery Program (NAIP) color infrared orthophotography for the State of Connecticut. It is a color infrared, fall on, 3.39 feet (1 meter) aerial survey taken during the summer of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation condition as well as supporting identification and mapping of habitat areas. The statewide infrared program is managed by the Connecticut Department of Energy and Environmental Protection (DEEP) and provided through a cooperative agreement with the USDA National Agricultural Imagery Program (NAIP). This map is a digital spatial data product prepared by the CT DEP Geographic Information Working Group (GIWG). The map uses color infrared airborne imagery that was produced by the private sector. It is intended to provide an overview of the landscape and may not be suitable for detailed mapping or other applications where accuracy is critical.

Orthophotography: National Agricultural Imagery Program (NAIP) is provided by the USDA’s Farm Service Agency through the Aerial Photography Field Office in Salt Lake City.

Data Sources:
- BASE MAP DATA: Based on data originally from a 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published between 1969 and 1992. It includes political boundaries, railroads, highways, airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.
- EXPLANATION DATA SOURCES: The location and shape of features in other GIS layers will not exactly match the orthophotography primarily due to differences in spatial accuracy and data collection dates. Smaller-scale data such as river networks, US routes, state routes, train, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.
