This map displays 2012 National Agriculture Imagery Program (NAIP) aerial orthophotography for the State of Connecticut. It is a color infrared, leaf on, 3.39-foot (1 meter) aerial survey taken during the summer of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The statewide color infrared orthophotography in the MapInfo format is available for download. This orthophotograph input images are not corrected so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and date collection dates. Smaller-scale city maps such as map indexes, U.S. routes, state routes, airports, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also, shown are hospitals, educational facilities, main rotation, and town boundaries. Important geographic locations and waterbodies are labeled.
