This map displays 2012 National Agriculture Imagery Program (NAIP) aerial orthophotography for the State of Connecticut. It is a color infrared, false color, 3.39 foot (1 meter) aerial survey taken during the summer of 2012. The infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting land use and mapping of habitat areas. The statewide distribution of vegetation, land use, and other cover categories is shown. The input image is not corrected so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown on this aerial photography primarily due to differences in spatial accuracy and data collection dates. Some-level data such as major minerals, U.S. routes, state routes, private, railroads, anderry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are hospitals, educational facilities, trail stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY - National Agriculture Imagery Program (NAIP) is provided by the USDA Farm Service Agency through the aerial photography field office in North Haven, CT.

BASE MAP DATA - Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps updated between 1990 and 2012. Includes parcel boundaries, roads, airports, geographic names, and geographic places. States and state names are from State Acts. Data copyrighted since these maps were published is not included on maps.

MAPS AND EMERAL LINES - Your local FTS office for this map and a variety of other as PDF versions. Visit the CT DEEP website for detailed data map digital data shown on this map.
