This map displays 2012 National Agricultural Imagery Program (NAIP), infrared orthophotography for the State of Connecticut. It is a color infrared, half-in. 3.39 foot (1 meter) aerial survey taken during the summer of 2012. The infrared orthophotography provides many services, such as observing crop and vegetation conditions and supporting agricultural and non-agricultural land use. The statewide coverage is based on 2012 NAIP orthophotography. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Smaller-level data such as lower level streets, US routes, state routes, county roads, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are roads, railroads, rail crossings, rivers, lakes, streams, wetlands, hospitals, educational facilities, town names, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY - National Agricultural Imagery Program (NAIP) is provided by the U.S. Department of Agriculture through the Naval Photographic (NAIP) Office at Scale 1:24,000.

ROAD MAP DATA - Based on data originally from 1:24,000-scale USGS 7.5-minute topographic quadrangle maps published between 1969 and 1992. It includes state boundaries, railroads, county roads, state roads, and minor streets. River and water names are from State. State Topographic Maps. Several maps were published in multiple editions and are compiled.

MAPS AND greeting cards - You can get CT EDU materials for this map and a variety of others at no cost. For the 2012 Orthophoto that you map data digital map data shown on this map.
