This map displays 2012 National Agriculture Imagery Program (NAIP) aerial orthophotography for the State of Connecticut. It is a color infrared, full color, 3.39-foot (1-meter) aerial survey taken during the summer of 2012. This color infrared orthophotography provides various services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The statewide color infrared, leaf on, 3.39 feet (1 meter) aerial survey taken during this map is performed by the National Agriculture Imagery Program (NAIP). It is a critical tool for supporting identification and mapping of habitat areas. The statewide color infrared, leaf on, 3.39 feet (1 meter) aerial survey taken during this map is performed by the National Agriculture Imagery Program (NAIP). It is a critical tool for supporting identification and mapping of habitat areas.

DATA SOURCES

ORTHOPHOTOGRAPHY - National Agricultural Imagery Program (NAIP) is provided by the USDA's Farm Service Agency through the National Agricultural Imagery Program (NAIP) in the U.S. This data includes the orthophotography that was developed for this map. It is a critical tool for supporting identification and mapping of habitat areas. The statewide color infrared, leaf on, 3.39 feet (1 meter) aerial survey taken during this map is performed by the National Agriculture Imagery Program (NAIP). It is a critical tool for supporting identification and mapping of habitat areas.

Major interstates, US routes, state routes, streets, airports, hospitals, educational facilities, train stations, and towns are included. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. High-level data such as major interstate, US routes, state routes, streets, railroads, and ferry crossings are displayed but may not match the location of each feature on the orthophotography. Also shown are supporting identification and mapping of habitat areas. The statewide color infrared, leaf on, 3.39 feet (1 meter) aerial survey taken during this map is performed by the National Agriculture Imagery Program (NAIP). It is a critical tool for supporting identification and mapping of habitat areas.

EXPLANATION

This map displays 2012 National Agriculture Imagery Program (NAIP) aerial orthophotography for the State of Connecticut. It is a color infrared, full color, 3.39-foot (1-meter) aerial survey taken during the summer of 2012. This color infrared orthophotography provides various services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The statewide color infrared, leaf on, 3.39 feet (1 meter) aerial survey taken during this map is performed by the National Agriculture Imagery Program (NAIP). It is a critical tool for supporting identification and mapping of habitat areas.
