The map displays 2012 National Agriculture Imagery Program (NAIP) aerial orthophotography for the State of Connecticut. It is color infrared, half on, 3.39 feet (1 meter) aerial survey taken during the summer of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The statewide orthophotography is also used to create aerial photography products and assist with the identification of urban areas, waterbodies, airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are displayed but may not match the information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Small-scale data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are roads, streets, railroads, ferries, airports, hospitals, educational facilities, town stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY - National Agriculture Imagery Program (NAIP) is provided by the USDA's Farm Service Agency through the Aerial Photography Field Office in Salt Lake City.

BASE MAP DATA - Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published between 1969 and 1992. It includes political boundaries, roads, urban areas, geographic features, rivers, and shorelines are from State. Acts 97-169, "Copyrighted 1995 by State of Connecticut, all rights reserved."
