This map displays 2012 National Agriculture Imagery Program (NAIP) digital orthoimagery for the State of Connecticut. It is a color infrared, 3.79 foot (1 meter) aerial survey taken during the summer of 2012. This digital orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitation. The resultant digital orthophotography product shows the location and shape of features in other GIS layers will not exactly match the data such as major interstates, US routes, state routes, streets, airports, hospitals, educational facilities, train stations, and town railroads, and ferry crossings are displayed but may not match the shape of features in other GIS layers will not exactly match. The location and intensity of colors depending on the area viewed. The location and intensity of colors depending on the area viewed.
