This map displays 2012 National Agriculture Imagery Program (NAIP) aerial orthophotography for the Town of Ridgefield. It is a color infrared, half on, 3.39 feet (1 meter) aerial survey taken during the summer of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The interval time between the two input images is not corrected so differences are present in the range and intensity of colors depending on the area viewed. The locations and shapes of features in other GIS layers will not exactly match the aerial photography primarily due to differences in spatial accuracy and data collection dates. Minor-level data such as major waterbodies, US routes, state routes, streets, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are airports, geographic names and geographic places. Streets and street names are from Tele Atlas ® labeled. Airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agriculture Imagery Program (NAIP) is provided by the USDA's Farm Service Agency through the National Photograpy (NAIP) Office at NADL, CT.
BASE MAP DATA - Based on data originally from 1:12,000 scale USGS 7.5 minute topographic quadrangles were published between 1988 and 2001. It includes political boundaries, roads, airports, geographic names, and geographic places. Rivers and street names are from State Figs. 1992 standards and these map information will never remain complete.

MAPS AND GEOPHIC LAYERS - Visit the CT GIS website for the maps and a variety of other geographic information. Visit the CT GIS website to download the base map digital aerial data shown on this map.
