This map displays 2012 National Agricultural Imagery Program (NAIP) aerial orthophotography for the State of Connecticut. It is a color infrared, 3.39 foot (1 meter) aerial survey taken during the summer of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting landuse and mapping of habitat areas. The statewide color infrared images are not colorfast so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Minor-level sites, such as minor universities, US routes, state routes, private railroads, and ferry terminals are displayed but may not match the locations of such features on the orthophotography. Also shown are hospitals, educational facilities, rail stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY - National Agricultural Imagery Program (NAIP) is provided by the US Department of Agriculture through the Federal Geographic Data Committee in Salt Lake City.

BASE MAP DATA - Based on data originally from a 1:31,680 scale USGS 7.5 minute topographic quadrangles map published between 1991 and 1995. It includes postal boundaries, roads, airports, geographic names and geographic places. Rivers and most names are from State Aids copyright by the United States Environmental Protection Agency.

MAPS AND GRADUAL LINES - Year the CT EDO developed this map and a variety of other in print format. This the CT EDO wishes to distribute the base map digital spatial data shown on this map.
