This map displays 2012 National Agriculture Imagery Program (NAIP) color infrared orthophotography for the State of Connecticut. It is a color infrared, leaf on, 3.39 foot (1 meter) aerial survey taken during the summer of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The statewide color infrared, leaf on, 3.39 foot (1 meter) aerial survey taken during the summer of 2012. This provides important geographic locations and waterbodies are labeled.

Important geographic locations and waterbodies are labeled. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Small-level data such as water courses, US routes, state routes, streets, railroad, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are airports, geographic names and geographic places. Streets and street names are from Tele Atlas® copyrighted data. Please map information as weather permits not complete.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agriculture Imagery Program (NAIP) is provided by the United States Farm Service Agency through the National Photographic Field Office at Wall Lake, Cia.
BASE MAP DATA - Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published between 1945 and 1992. It includes political boundaries, landmarks, airports, geographic names and geographic places. Streets and street names are from Tele Atlas® copyrighted data. Please map information as weather permits not complete.

EXPLANATION
This map displays 2012 National Agriculture Imagery Program (NAIP) color infrared orthophotography for the State of Connecticut. It is a color infrared, leaf on, 3.39 foot (1 meter) aerial survey taken during the summer of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The statewide color infrared, leaf on, 3.39 foot (1 meter) aerial survey taken during the summer of 2012. This provides important geographic locations and waterbodies are labeled.
