This map displays 2012 National Agriculture Imagery Program (NAIP) infrared orthophotography for the State of Connecticut. It is a color infrared, full color, 3,399 foot (1 meter) aerial survey taken during the Summer of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The nationwide production of infrared orthophotography for agricultural purposes is an on-going program. The production method provides input images is not corrected so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Short-level data such as major buildings, US routes, state routes, minor railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agriculture Imagery Program (NAIP) is provided by the USDA’s Farm Service Agency through the Aerial Photography Field Office in Salt Lake City.
BASE MAP DATA - Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published between 1969 and 1992. It includes political boundaries, railroads, airports, geographic names and geographic places. Rivers and street names are from State-Administered data. The 1992 altimetric orthophoto was produced from lidar data collected by the U.S. Geological Survey.
MAPS AND DIGITAL DATA - Use the CT DEP website for this type maps and a variety of other as seen in the past. Visit the CT DEP website to determine if these maps and digital data have changed on the maps.
