EXPLANATION
This map displays 2012 National Agricultural Imagery Program (NAIP) infrared orthophotography for the State of Connecticut. It is a color infrared, last on, 3.39 feet (1 meter) aerial survey taken during the Summer of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation condition as well as supporting identification and mapping of habitat areas. The atmospheric differences in spatial accuracy and data collection dates. Street-level information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. The location and shape of features in other GIS layers will not exactly match the orthophotography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are hospitals, educational facilities, town stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agricultural Imagery Program (NAIP) is provided by the USDA’s Farm Service Agency through the Aerial Photography Field Office in Salt Lake City.
ROAD MAP DATA - Based on data originally from 1:24,000-scale USGS 7.5-minute topographic quadrangle maps. Data collected between 1990 and 2012. It includes protected landmarks, landmarks, airports, geographic names and geographic places. Roads and street names are from State ARES, recompiled and then entered on a map in a GIS data base, which is then merged with the orthophotography.
MAPS AND GEOLINENED - Visit the CT ECO website for this map and a variety of others in PDF format. Visit the CT DEP website to download the base map digital spatial data shown on this map.
