This map displays 2012 National Agriculture Imagery Program (NAIP) aerial orthophotography for the State of Connecticut. It is a color infrared, 1:5,799 (1 meter) aerial survey taken during the summer of 2012. This aerial orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The aerial orthophotography is not corrected for differences in spatial accuracy and data collection dates. The scale of this map may not match the locations of such features on the orthophotography. Also shown are airports, geographic names and geographic places. Streets and street names are from Tele Atlas® input images is not corrected so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers may not exactly match the aerial photography primarily due to differences in spatial accuracy and data collection dates. Minor-level data such as minor interstates, US routes, state roads, streams, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are hospitals, educational facilities, main stations, and town boundaries. Important geographic locations and water bodies are labeled.

**DATA SOURCES**

ORTHOPHOTOGRAPHY: National Agricultural Imagery Program (NAIP) is provided by the USDA’s Farm Service Agency through the United States Geological Survey (USGS) in St. Louis, MO.

BASE MAP DATA: Based on data originally from 1:12,000-scale USGS 7.5-minute topographic quadrangle maps published between 1947 and 1953. It includes provincial boundaries, airports, county, geographic names, and geographic places. Rivers and streets names are from state-level input images is not corrected so differences are present in the range and intensity of colors depending on the area viewed. Major highways and Ferries crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are hospitals, educational facilities, main stations, and town boundaries. Important geographic locations and water bodies are labeled.
