This map displays 2012 National Agriculture Imagery Program (NAIP) infrared orthophotography for the State of Connecticut. It is a color infrared, false color infrared aerial survey taken during the summer of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The statewide information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Small-scale data such as major streets, US routes, state routes, minor roads, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agricultural Imagery Program (NAIP) is provided by the USGS Farm Service Agency through the Aerial Photography Field Office in Salt Lake City.
BASE MAP DATA - Based on data originally from 1:12,000 scale USGS 7.5 minute topographic quadrangle maps published between 1990 and 2012. It includes political boundaries, hydrologic, geologic, geographic features, and geographic places. Rights and users are as for these data. Copyrighted data from land information within current land ownership.
MAP AND CARTOGRAPHY - This map includes data from GIS Federal, as well as other as PDF format. This GIS Federal has determined these map symbols for data shown on this map.
