This map displays 2012 National Agriculture Imagery Program (NAIP) aerial orthophotography for the State of Connecticut. It is color infrared, half in, 3.39 foot (1 meter) aerial survey taken during the summer of 2012. This color infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. This orthophotography was produced from 2.8-meter (0.9-foot) resolution NAIP color infrared images captured during the summer of 2012. The orthophotography is color infrared and uses a Lambert Conformal Conic Projection and a State Plane Coordinate System of 1983, Zone 3526. The locations of features in other GIS layers may not exactly match with the location of features in the orthophotography. Its location and shape of features in other GIS layers will not exactly match with the location of features in the orthophotography primarily due to differences in spatial accuracy and data collection dates. Street level data such as street names, US routes, state roads, city streets, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also drawn are public institutions, hospitals, educational facilities, main roads, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY: National Agricultural Imagery Program (NAIP) is provided by the USDA's Farm Service Agency through the Aerial Photography Field Office in Salt Lake City.
BASE MAP DATA: Based on data originally from 1:1,200 scale UNGIS 7.5 minute topographic maps published between 1960 and 1992. In some products, base maps include federal, state, county, and special use boundaries.
MAPS AND OTHER SOURCES: This map and a variety of other as PDF sources. Use the CT ESRI website for this map and a variety of other as PDF sources. Use the CT ESRI website for this map and a variety of other as PDF sources.
