This map displays 2012 National Agriculture Imagery Program (NAIP) infrared orthophotography for the State of Connecticut. It is a color infrared, half-arc, 3.79-foot (1 meter) aerial survey taken during the summer of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The statewide NAIP infrared orthophotography is based on digital orthophotos which have been geo-referenced. The input images are not corrected so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match the infrared orthophotography. The infrared orthophotography was created from high resolution infrared images and the orthophotography was created from high resolution infrared images and no data is available after the date of the survey. Airports, hospitals, educational facilities, train stations, and town boundaries are shown. Important geographic locations and waterbodies are labeled. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agriculture Imagery Program (NAIP) is provided by the USDA, Farm Service Agency through the National Agricultural Imagery Program (NAIP) Office at Wall Lake, IA.
BASE MAP DATA - Based on data provided by the U.S. Geological Survey, National Mapping Division. This data includes: political boundaries, railroads, airports, geographic names, and geographic places. Rivers and street names are from State of E elevations from GTED elevation model.
MAPS AND DIGITAL DATA - This CT DEEP website is for this map and a variety of others as PDF format. Visit the CT DEEP website to download the best map digital spatial data shown on this map.
