This map displays 2012 high resolution orthophotography for the State of Connecticut. It is a natural color, leaf-off, 1 foot (0.30 meter) aerial survey taken in the Spring of 2012. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street level data such as major intersections, T-intersections, main streets, railways, and ferry crossings are displayed yet may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, towns stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY: Aerial imagery is provided through a partnership between Connecticut Department of Emergency Services and Public Protection (DEEP) and the Connecticut Department of Transportation (CDOT). Along with the United States Geological Survey (USGS) providing support through project management, contracting and quality assurance/quality control (QA/QC).

BASE MAP DATA: Based on data originally from 1:24,000 scale USGS 7.5 minute topographic quadrangle maps published between 1991 and 1999. It includes political boundaries, roads, airports, geographic names and geographic places. Roads and other names are from the 1999 USGS copyrighted data. Since map information is another current use complete.

MAP AND GEOGRAPHIC DATA: Visit the CT DEEP website for this map and a variety of others on PDF format. Visit the CT DEEP website to download the free map digital special data shown on this map.
