2012 Color Orthophoto
Leaf-Off
Groton, CT
(East)

EXPLANATION
This map displays 2012 high-resolution orthophotography for the Town of Groton. It is a natural color, leaf-off, 1 foot (0.30 meter) aerial survey taken in the Spring of 2012. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major intersections, US routes, state routes, streets, railroads, and ferry crossings are displayed yet may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY: Aerial imagery is provided through partnerships between Connecticut Department of Emergency Services and Public Protection (DEEP), the Connecticut Department of Transportation (CDOT), and the National Oceanic and Atmospheric Administration (NOAA) along with the United States Geological Survey (USGS) providing support through project management, contracting, and quality assurance/quality control (QA/QC).

BASE MAP DATA: Based on data originally from 1:24,000 scale (1/24K) color aerial photography, quad angle maps published between 1991 and 2005 by local municipalities, railroad, airport, and geographic names and geographic place. Rivers and flood waters are from U.S. Army, copyrighted data. River map information is another current tax layer.
